is said, once pointed out that he had received advancement in the church for every child born to him. 'It is to be hoped, brother," said Dr. Wilber-force, "your family will not continue to enlarge, for there are only two translations more possible to you-Canterbury and Heaven." The translation to Canterbury was early barred; Archbishop Thomson had to rest the second son of the church.

An electrician who has made speciality of spectacular electricity says the day is not far off when electrical fireworks will supersede those now used. He declares that for a comparatively moderate outlay he could arrange an electrical display that would last for many years, and could be repeated as often as desired. It would comprise rockets, Roman act to impose a tax upon bachelors. candles, wheels Niagara Falls and all It will be a practical revival of s

the modern pyrotechnical effects.

President Garfield at School.

James A. Garfield was sent to school when six years of age. He soon showed that he had a good memory, and great powers of observation, learning a great deal from overhearing the recitations of the older scholars in his fellow that if he studied hard he might some day be a General. James soon after went to his mother, and asked her to tell him what a General was. His mother then told him an interesting story of how his ancestors had fought in the Revolutionary war, saying that though several of them deserved to be Generals, they never reached that dignity. James under-stood what it was to be a General, though he expressed grave doubts whether he would ever be one. This same teacher laid down in the

school a new rule to the effect that

scholars should not look about the

school-room, as it interfered with

studying their lessons. Now little James Garfield was of a very active

turn of mind, he had always been used

rule, for by nature he was a most obedient child, but every now and

then his eyes would be raised from his

book, and go wandering off to the group of scholars reciting in another part of the room. That evening, in

the presence of James, the teacher complained to his mother of his want

of attention. The mother remarked

that perhaps he could not sit still; that he had been an intensely active child

all his life. James cried, and said

that he meant to be a good boy, and

that he would try again to sit still. But the next day he would, as the say-

ing is, "prick up his ears" when the other scholars were reciting, and his

eyes would roam away from the print-

ed page before him. The teacher,

however, had changed his opinion of

the restless scholar; he noticed that he

acquired his lessons faster than any other boy in the class; so he came to

the conclusion that James Gartield

really could not master his restless-

ness, which was not the result of au

idle nature, but of an active, inquir-

ing mind, and he ceased to reprimand

Young Garfield darted out of the

door, and ran home as fast as he could,

reaching the house in about five min-

utes; then he turned round, and, with-

out stopping a moment, ran back to school and took his seat in the class.

The teacher soon noticed him, and

James said he had been home, "but

you did not tell me to stay," he added.

explanation, and James was informed

MAHOGANY.

How This Beautiful Wood Was Discover-

The discovery of the beautiful and costly timber known as mahogany was purely accidental. The first mention made of it, says the Detroit Free Press. residing in London. This gentleman at the time of the receipt of the wood the planks in the hands of the carpen-ters. They attempted to cut it, but

because of its hardness very quickly do with the lumber which so success- attraction of plants and flowers as well was directed to make a candle-box with a portion of the wood. The same objection was advanced by this work- fine foliage plants, with a very few man, but being a persevering individual, he persisted, and finally made the box. When polished it so outshone anything previously made that it very

quickly became an object of curiosity. and the people flocked to see it. As a consequence the wood became quite popular, especially after a por-tion of the physician's treasure was employed in the construction of two bureaus, one for himself and the other for the duchess of Buckingham. These specimens of cabinet work caused the rejected wood to become a prominent factor in the construction of luxurious pieces of furniture. Thus Wollaston was amply rewarded for his perseverance in fashioning it into the candlebox, and his name, together with that of the physician and his nautical brother, became inseparably connected with the history of the introduction of this wood into civilized lands.

The Boston Reporter.

A woman reporter is apt to be peculiar study. When she is sent to eport a lecture she enters the hall and walks up to the reporters' tables with quiet and modest grace. From the depths of a reticule she brings forth a quantity of nice white paper, at least half a dozen pencils pointed at both ends, and lastly, a bag of candy. This is her equipment for the fray. Her confrere of the other sex probably sits opposite her, writing with a stubby pencil upon the back of an old envelope, and trying to look miserable at the bag of candy. When the speaker the bag of candy. When the speaker comes forward she joins the audience in giving him a rousing reception, clap-ping as vigorously as any one. She smiles or laughs at his jokes, looks pathetic when the speaker's words demand it, and nods approvingly when a point is well taken. She writes busily all the time, too. When the address is finished she gives her share of the applause, and then quietly stows away her implements of war and departs.— Boston Record.

A Sicilian Tragedy.

The sexton of the Syracuse (Sicily) graveyard found a young woman dead in the vestibule of the chapel. She was beautiful, handsomely dressed, and appeared to be English or American. Beside her lay an open English letter of four pages, the conclusion of which was: "I stab you as many times as you have kissed me and lied to me, and tear out the heart that has been so breast had been cut open and the heart had been removed. The next day a young man of 30 was found in the graveyard with a revolver shot in his spirit was the one which rebuked me for my profesite." false." And, in fact, the woman's The affair has not been ex-

WHAT IS LEAP YEAR? How Julius Casar and Pope Gregory XIII. Reformed the Calendar.

It may be interesting as well as in-structive to some to know just what is meant by leap year, why it is so named, and what gave rise to its origin, says C. Betta in the Gadsden (Ala.) Leader. The Julian calendar was arranged in the year 46 B. C. by Julius Cæsar up-on the supposition that the year con-sisted of 365 days and 6 hours exactly -but more accurately it is but 365 days 5 hours 48 minutes and a fraction -and reckoning three years to consist of 365 days, gave to the fourth 366. The day thus intercalated every fourth year was inserted after the 24th of February (ante diem sextum kalendas martii), and in consequence of being also reckoned as the sixth day before the kalends of March was styled bis-sextum, and long afterward bis-sex-tilem, and hence the year itself is termed bis-sextilem, or in English leap year, because it leaps over or exceeds

others by one day.

The mode of reckoning previous to this time had fallen into much confusion, and this reform was then a very valuable one, and, as it placed the reckoning behind the sun only about 11 minutes a year-that is, a day in about 130 years-it was very long before any considerable inconvenience arose from it. In the progress of time, however, the error became more serious, until in 1582 Pope Gregory XIII. undertook to reform the calen dar. Gregory took as his starting point the period of the council of Nice. the first general council of the church (A. D. 325), and, desiring to fix the vernal equinox permanently on or near March 21, on which day it happened in that year, and finding that the reckoning had lingered behind the sun, in the interval between A. D. 325 and 1582, at least ten days, he ordered that the day succeeding the 4th of October, 1582, instead of being called the 5th should be called the 15th. And to prevent similar accumulations of error thereafter he further directed that at certain convenient periods the intercalary day of the Julian correction be omitted, viz.: In the centurial years of A. D. 1700, 1800 and 1900, and being inserted again in 2000, should be again left out in 2100, 2200 and 2300, and again inserted in 2400, etc.—thus reducing the error of the Julian correction to 2 hours 42 1-2 minutes in 400 years, or one day in 3,546 years. which he reasonably thought the world

could afford to disregard.

The Gregorian calendar was adopted immediately in all countries of the Romish faith, but in the Protestant states it was not introduced until almost two centuries later, such was the unreasoning bigotry of the times. And Russia, to this day, employs the Julian calendar, making a difference of about twelve days between her mode of computing time and that of the rest of the Christian world. The Gregorian calendar and mode of computa-tion were adopted in England and in the English dominions throughout the world, and therefore in the United States in 1754 by a statute which enacted that the natural day next following the 2nd day of September in that year should be reckoned the 14th day of September, omitting for that time the eleven intermediate days (the error of the Julian correction having, since 1542, amounted to another day) and provision was made identical with that of Gregory, for maintaining the correction through subsequent cent-

Big Shearing Machinery.

Probably the largest specimen of shearing machinery in the world is in the plate mill of the Eston works of Colkow, Vaughan & Co. (limited), in England. This machine has blades twelve feet long, and has sheared cold deck-plating for British warships up to two and a half inches thick. With this machine a plate of steel nine feet wide can be cut right down the middle. The shears weigh 270 tons, and are driven among which are the Superior, Champion, Em-
